PROFESSIONAL SUMMARY

Mobile Engineering Lead | Engineering Manager Strategic leader with 6+ years of experience in the mobile ecosystem, focusing on team scaling, technical excellence, and cross-platform delivery. Proven expertise in leading multi-platform teams to deliver high-performance, scalable products. Specialized in establishing Mobile DevOps cultures (CI/CD), modular architecture strategy, and mentoring engineers to bridge the gap between technical complexity and business goals.

TECHNICAL EXPERTISE

- **Languages:** Swift (Advanced), Objective-C (Reading Proficiency), SQL.
- **Frameworks:** SwiftUI, UIKit, Combine, CoreData/SwiftData, Realm, SQLite, XCTest (Unit/UI Testing).
- **Architecture:** MVVM, Repository Pattern, Modularization (Swift Package Manager).
- **Tools & DevOps:** Xcode Instruments (Allocations/Leaks), Fastlane, GitHub Actions.
- **Key Skills:** Concurrency (Async/Await), Memory Management (ARC), dependency Injection, Offline-First Strategy.

WORK EXPERIENCE

Chapter Lead Mobile Developer | Komerce – Purbalingga

Nov 2021 – Present

- **Engineering Leadership:** Led the mobile division, managing technical decisions and career growth for iOS and Android engineers. Established strict **Code Review Standards** and streamlined development workflows to improve team velocity.
- **Architectural Standardization:** Defined and enforced **Clean Architecture (MVVM)** patterns across mobile projects, ensuring code consistency and reducing technical debt in legacy codebases.
- **iOS Development (RajaOngkir App):** Spearheaded the development and release of the official **RajaOngkir iOS App**. Optimized networking layers to handle high-frequency shipping cost queries with low latency.
- **Mobile DevOps:** Architected and maintained **CI/CD pipelines (GitLab)** to automate testing and deployment, reducing release cycle time and minimizing manual errors.
- **Strategic Planning:** Acted as interim Product Manager, designing technical roadmaps (KPIs) and prioritization frameworks to align engineering output with business goals.

iOS Developer | Komerce – Purbalingga

Jan 2021 – Nov 2021

- **Product Development:** Built a native iOS HRIS partner app from scratch using **Swift** and **MVVM architecture**.
- **Feature Implementation:** Developed complex features including Face Verification for attendance and background location tracking. Implemented secure permission handling strategies to comply with Apple's privacy guidelines.

iOS Developer (Contract) | Prodia – Freelance

3-month Contract

- **Performance Optimization:** Diagnosed and fixed critical bottlenecks in the booking flow. Utilized **Xcode Instruments** to identify memory leaks and UI hangs.
- **Business Impact:** Improved the performance of the key booking feature, directly strengthening the user conversion funnel and reducing session drop-offs.
- **Code Stability:** Refactored legacy session management logic, stabilizing user session timers and preventing random logouts.

iOS Developer | Technopartner Indonesia – Yogyakarta

Feb 2018 – Feb 2020

- **App Delivery:** Delivered 10+ iOS applications for various clients (e.g., Ardiles, Altoro) using Swift.
- **Maintenance & Refactoring:** Responsible for bug fixing, UI redesigns, and performance tuning of existing codebases. Successfully migrated legacy features to newer iOS standards.

KEY ENGINEERING PROJECTS

iOS Distributed Modular Architecture (Micro-Features Implementation) | [[View on GitHub](#)] *(Previously recognized as MealsApp)* An enterprise-grade architectural showcase demonstrating **Feature-Module Isolation** using **Swift Package Manager (SPM)**.

- **Architecture:** Decoupled Monolith into independent modules (**Core**, **Features**, **InfraShared**) to simulate a scalable team workflow and prevent circular dependencies.
- **Router Pattern:** Implemented a centralized **Coordinator/Router** pattern to decouple Navigation logic from Views, ensuring total separation of concerns.
- **Tech Stack:** SwiftUI, Combine, Clean Architecture, Realm, SPM.
- **Engineering Impact:** Designed a strict Dependency Graph where Feature Modules operate in sandboxes, communicating only via abstracted Protocols and DI Containers.

Postie (Ultra-Lightweight Network Tester) | [\[View on GitHub\]](#) A native macOS utility designed as a high-performance, low-resource alternative to Electron-based API clients.

- **Performance Optimization:** Achieved an extreme memory footprint of **35-50MB RAM** by utilizing pure Native AppKit/SwiftUI and avoiding heavy third-party dependencies.
- **Technical Trade-off:** Deliberately chose **Atomic File-based Persistence** over SwiftData to eliminate database engine overhead, prioritizing instant launch times and minimal resource usage.
- **Advanced Networking:** Implemented raw **URLSession** with custom configurations for timeout handling, cache policy management, and human-readable error mapping.

PingChekker (macOS/iOS Tool) A network diagnostic tool built to demonstrate deep understanding of **URLSession** and **Concurrency**.

- **Tech Stack:** Swift, SwiftUI, Menu Bar App.
- **Highlight:** Implemented raw networking handling without third-party libraries to manage complex request lifecycles.

Bookmarker (Offline-First App) A reading tracking application focusing on data persistence and clean architecture.

- **Tech Stack:** SwiftData, MVVM, Repository Pattern.
- **Highlight:** Designed a robust offline-sync mechanism ensuring data integrity when the device is disconnected.

EDUCATION

Bachelor's Degree in Information Technology

Universitas Amikom Purwokerto | Graduated: 2012

CERTIFICATIONS

- **iOS & Swift – The Complete iOS App Development Bootcamp** (Udemy)
- **Flutter Essential Training** (LinkedIn Learning)
- **iOS & Swift – Menjadi iOS Developer Expert** (Dicoding) – Nov 2025
