

RIZKA FAJAR NUGRAHA

Flutter Developer | Mobile Engineer

Purbalingga, Indonesia | r.fajarnuraha@gmail.com | +62 878-3102-5157

[\[LinkedIn Profile URL\]](#) | [\[GitHub Profile URL\]](#) | [\[Full Flutter Portfolio / Project Details\]](#)

PROFESSIONAL SUMMARY

Flutter Developer / Mobile Engineer with 6+ years across mobile engineering, production delivery, and technical leadership. Strongest in Flutter app architecture, BLoC/Cubit, GoRouter, Dio/API integration, Firebase authentication, offline-friendly flows, maps/location, and maintainable feature boundaries. Previously led mobile engineering standards across iOS and Android teams, with native Swift/Kotlin background that helps when Flutter needs platform-level integration.

For deeper case studies and the complete Flutter portfolio, see: [\[Full Flutter Portfolio / Project Details\]](#)

FLUTTER ROLE FIT

- **Production Flutter delivery:** Experience spans confidential company/client apps and public portfolio projects, with case studies linked for deeper review.
- **Architecture and maintainability:** Comfortable with BLoC/Cubit, Clean Architecture, repository pattern, dependency injection, typed error handling, route guards, and modular feature boundaries.
- **Native and performance depth:** Native Swift/Kotlin background supports MethodChannel, Dart FFI, CameraX/ML Kit, Apple Vision, isolates, and platform-level debugging when Flutter needs more than UI code.

TECHNICAL EXPERTISE

- Flutter & Dart: BLoC, Cubit, Provider/MVVM, GoRouter, Dio, GetIt, Dartz/Either, Equatable, async/await, isolates/compute(), MethodChannel, Dart FFI.
- Mobile App Architecture: Clean Architecture, MVVM, repository pattern, dependency injection, feature modules, domain/data/presentation separation, offline-first strategy.
- Production Mobile Features: authentication, JWT token refresh, Firebase Auth, Google Sign-In, FCM, maps/location, geofence, liveness flows, pagination, search debounce, bookmarks, profile/avatar upload.
- Local Storage & Networking: FlutterSecureStorage, SharedPreferences, REST API integration, interceptors, error mapping, graceful cache fallback, image/network caching.
- Testing & Tooling: unit tests, bloc_test, mocktail, http_mock_adapter, debug flavors, Chucker, multi-flavor builds, Flutter analyzer/lints, CI/CD awareness, code review standards.
- Native Support: Swift, SwiftUI, UIKit, Kotlin, Android SDK, CameraX, ML Kit, Apple Vision, VisionKit, URLSession, SQLite, CocoaPods, Gradle, Xcode, Android Studio.

WORK EXPERIENCE

Chapter Lead Mobile Developer | Komerce - Purbalingga | Nov 2021 - Present

- Led mobile engineering standards across iOS and Android teams, including code review quality, architecture consistency, delivery workflows, and mentoring.
- Contributed to production mobile applications across logistics, shipping, seller operations, HRIS, workforce management, and partner/talent operations.

- Established practical architecture habits around MVVM, repository pattern, modular boundaries, API integration, and maintainable feature delivery.
- Worked close to product and operations teams, translating business workflows into mobile experiences that could be used daily by internal teams, partners, sellers, and field users.
- Maintained native iOS and Android delivery capability while shifting current focus toward Flutter production roles.

Flutter Developer| Production / Client Projects | 2024 - 2026

- Built and contributed to Flutter applications for HRIS, workforce management, government aid workflows, livestock monitoring, and partner operations.
- Implemented common production mobile patterns: authenticated API calls, role-based flows, maps/geolocation, liveness/attendance, offline/local cache, push notifications, loading/error states, and multi-flavor environments.
- Used Flutter BLoC/Cubit, GoRouter, Dio, GetIt, SharedPreferences, Firebase services, maps packages, WebView, charts, skeleton loading, and debugging tools across real app contexts.

SELECTED FLUTTER PROJECTS

Komtim Partner| *Flutter production app | Komerce / Komtim | 2026*

Links: [\[Case Study\]](#) | [\[Product Website\]](#) | Codebase: Confidential / proprietary company project.

- Partner-facing app for talent pool operations, invoices, Kompay, attendance, shopping, performance reports, ratings, PIN, feed, and notification workflows.
- Relevant to Flutter roles because it shows authenticated multi-feature workflows, operational UX, cross-platform delivery ownership, and product-facing communication in a real business domain.

Mitra Komtim v2| *Flutter HRIS & workforce app | Komerce / Komtim | 2024 - 2026*

Links: [\[Case Study\]](#) | Codebase: Confidential / internal company project.

- Internal mobile app for employees and admins: geofence attendance, liveness, leave, shifts, reporting, procurement, HR workflows, SDM, and probation.
- Handled business-critical HRIS/workforce flows that combine role-based access, location checks, liveness verification, and daily operational usage.

BAST System| *Flutter government aid workflow | Government Project (KKP) | 2024 - 2025*

Links: [\[Case Study\]](#) | Codebase: Confidential / government client project.

- Digitized fisheries aid workflows from CPCL field survey, procurement, logistics, to asset handover with role-based access and offline capability.
- Stack: Flutter, Dart, BLoC/Cubit, GoRouter, Dio, GetIt, Firebase Cloud Messaging, Firebase Remote Config, Geolocator, FlutterMap, Dartz, SharedPreferences, Chucker, Lottie, Google Fonts, Shimmer, Intl.
- Relevant to Flutter roles because it combines field operations, offline-friendly behavior, maps/location, role-based access, remote config, push notifications, and resilient UX in a client/government context.

Internak App| *Flutter livestock monitoring platform | 2024 - 2025*

Links: [\[Case Study\]](#) | [\[GitHub Repository\]](#)

- Mobile app for farmers to record livestock, cages, feed, and daily activities while advisors monitor progress and provide recommendations via community/consultation features.
- Stack: Flutter, Dart, Flutter BLoC, GoRouter, GetIt, REST API, Google Sign-In + Firebase Auth, OpenStreetMap/flutter_map, Google Maps, Geolocator, SharedPreferences, cached_network_image, fl_chart, Lottie, Shimmer, WebView, Connectivity Plus, Permission Handler, Chucker, multi-flavor builds.

- Relevant to Flutter roles because it combines architecture, Firebase/social login, maps, charts, WebView, permissions, local cache, and dev/staging/production flavor discipline in one product domain.

News App (BLoC + Clean Architecture) | *Portfolio architecture project* | 2026

Links: [\[Case Study\]](#) | [\[GitHub Repository\]](#)

- Built a Flutter news app with full Clean Architecture, BLoC + Cubit, GoRouter auth guards, Dio ApiClient/interceptors, JWT refresh, Firebase OTP forgot password, Google Sign-In, profile/avatar update, bookmarks, search, and feed pagination.
- Testing coverage includes core network, auth datasource/repository/usecases/BLoC, news datasource/repository/usecases/Cubits, entities/models, validators, and utility layers.
- Relevant to Flutter roles because it is public code proof for Clean Architecture, testability, token/session handling, API error handling, and explainable engineering decisions beyond UI implementation.

ADVANCED FLUTTER / MOBILE ENGINEERING PROJECTS

AuraApp | *Flutter + Swift native bridge + Apple Vision* | 2026

Links: [\[Case Study\]](#) | [\[GitHub Repository\]](#)

- Connected Dart UI to Swift native Apple Vision through MethodChannel for offline face landmark detection and Golden Ratio calculation while keeping Domain logic unaware of native implementation details.
- Relevant to Flutter roles because it demonstrates native interoperability, MethodChannel serialization, image processing, and Clean Architecture boundaries for platform-specific capability.

VoiceChanger | *Flutter + Dart FFI + C++ SoLoud DSP* | 2026

Links: [\[Case Study\]](#) | [\[GitHub Repository\]](#)

- Integrated a C++ audio engine via Dart FFI for low-latency pitch/tempo manipulation, with BLoC/Cubit state management and Dart Isolate usage for visualizer computation.
- Relevant to Flutter roles because it demonstrates performance thinking, native memory boundary awareness, isolate usage, and when Dart FFI is a better fit than MethodChannel.

LiquidGlassTabs | *Custom Flutter bottom navigation widget* | 2026

Links: [\[Case Study\]](#) | [\[GitHub Repository\]](#)

- Built a reusable Apple-style liquid glass bottom navigation widget from scratch using BackdropFilter, CustomPainter, AnimatedPositioned, AnimatedScale, animated text, SweepGradient, HapticFeedback, and no external UI package.
- Relevant to Flutter roles because it demonstrates rendering pipeline awareness, polished UI engineering, animation, haptics, and reusable widget API design.

Android Liveness Detection SDK | *Kotlin / Android SDK* | 2025 - 2026

Links: [\[Case Study\]](#) | [\[GitHub Repository\]](#)

- Built reusable Android face liveness SDK with CameraX, Google ML Kit Face Detection, multi-step verification, audit mode, on-device processing, Gradle/JitPack distribution, and ProGuard/R8 consumer rules.
- Relevant to Flutter roles because it demonstrates native Android depth useful for Flutter apps that need SDK modules, CameraX, ML Kit, Gradle distribution, and platform-specific debugging.

RajaOngkir iOS | *Native iOS shipping utility* | *RajaOngkir* | 2025

Links: [\[Case Study\]](#) | *Codebase: Confidential / proprietary production app.*

- Developed native iOS app for domestic/international shipping cost checks, waybill tracking, courier filtering, and local waybill history using Swift, UIKit, URLSession, Codable, SQLite3, UserDefaults, Google Mobile Ads SDK, and CocoaPods.

SUPPORTING FULL-STACK / TOOLING RANGE

- **Company Detector Bot:** live AI automation system used in company operations to detect business/company register accounts from limited signup data; built as a hybrid Go + OpenClaw AI pipeline with PostgreSQL evidence storage, dashboard review, webhook queue, sequential worker, Telegram delivery, Slack daily prospect digest, and VPS deployment. Links: [\[Case Study\]](#) | [\[GitHub Repository\]](#) | [\[Live Demo\]](#)
- free-api-news: Go + PostgreSQL REST API used as a real backend for Flutter News App iterations; includes JWT access token, refresh token rotation, profile, categories, articles, Swagger, systemd, and VPS deployment.
- Personal Brand Platform: Phoenix LiveView + PostgreSQL CMS and commerce-ready portfolio platform with Backpex admin, unified search, Midtrans-ready checkout, media management, tests, and VPS deployment.
- Developer tools: Postie macOS API client, PingChekker network quality monitor, RunEmulator Android/iOS launcher, and ScrapingX CLI show practical tooling instincts that support daily mobile development.

CERTIFICATIONS & CONTINUOUS LEARNING

- iOS Developer Expert - Decoding certificate evidence stored in personal portfolio media library.
- Maintains public learning notes and project case studies covering Flutter architecture, BLoC vs MVVM, null safety, UI rendering, isolates, native interoperability, and AI-assisted engineering workflows.
